NOIR PIXEL

MEDIA
KIT 2025

Legend has it that Noir Pixel was kidnapped by a powerful algorithm at the age of eight while gardening with his grandfather. He reemerged years later, altered: his mind fused with data, his music a bridge between worlds.

Noir Pixel explores the tension between technology and humanity, questioning its ethical dilemmas while embracing its creative potential. It invites listeners to reflect on the price of progress and the blurred lines between reality and the virtual.

Created by a musician with 20 years in the underground scene and a PhD in computer science applied to human sciences, Noir Pixel blends deep academic insight with sonic innovation, crafting music that is both thought-provoking and emotionally charged.

HACKING BEATS

FIRST RELEASE

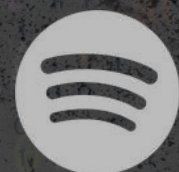

Noir Pixel's debut EP is a sonic exploration of technology's grip on human experience, weaving together AI, digital identity, and the emotional toll of hyper-connectivity. From the algorithmic dominion of *Random Forest* to the recommender systems echo chambers of *Preferential Attachment*, each track interrogates the promises and perils of our digital age. *Wifi Pangea* dissolves identity into the vast network, while *Fully on-Site* exposes the emotional longing between a father and child. *Doot Again* closes the journey with a haunting meditation on fleeting and unlimited pleasure and the void left in its wake.

To bring these stories to life, Noir Pixel has invited a diverse group of artists to contribute their voices and energies: Samtar, a uniquely versatile vocalist with a powerful range, blending melancholic folk and alternative rock to add ethereal depth to *Random Forest*. Jaydi Zavala, a genre-bending singer whose hypnotic voice traverses jazz, soul, and experimental pop, featured on *Wifi Pangea* and *Doot Again*. JuztKP, a sharp rapper whose intricate wordplay dissects digital realities and societal patterns on *Preferential Attachment*.

TRACKLIST

01. RANDOM FOREST
02. FULLY ON-SITE
03. WIFI PANGEA
04. PREFERENTIAL ATTACHMENT
05. DOOT AGAIN

A grandfather and grandson plant a tree, symbolizing knowledge passed down through generations. Their moment is interrupted by Random Forest, a charismatic figure offering tempting decision-making services. As the boy, possibly Noir Pixel himself, ventures deeper, he is faced with a choice whose consequences remain uncertain.

MUSIC VIDEO

Random Forest is an algorithm that harnesses the power of multiple decision trees, each contributing to predictions and classifications through the embrace of data chaos. It weaves through vast networks of information, seeking the best possible outcomes. From forecasting the weather to deciding which ads you see, from identifying customer churn to recommending movies, from filtering spam emails to guiding self-driving cars, and even detecting fraud in banking, its reach is limitless, quietly shaping the decisions that govern our digital world.

HACKING

Inspired by the spirit of the digital era, Noir Pixel's remixes called "hacks" are a tribute to the artists who have shaped his musical and artistic journey. By tapping into the works of artists who surround his daily life, he unlocks a new dimension of their music, paying homage while embedding his own fingerprint in the process.
